

Introduced Species Management Plan

The document "Managing Introduced Animals (non-cloven) on Member Sites" will assist in completing this plan.

A separate plan will be needed for different species.

Member/s: Bruce + Nicola Site: 59 Date: 9/7/23

Reason/s for having the animal/s: Chickens are an integral part of our Permaculture Gardening System

Species / Breed / Gender: Isa Brown Hens (chickens)

Number: up to 10

Care and welfare: As the chickens are a very important part of our Permaculture system they will be looked after and cared for in the highest regard. We have neighbors organized to care for them when away.

Range and containment: Chickens will be housed in a mobile chicken tractor which is contained within a fenced area.

Protection of the Environment including Native Flora & Fauna:

Chickens will not be able to free range so will have no effect on Flora & Fauna.

Waste and maintenance: All waste will be turned back into the soil of each garden bed as tractor is moved within the system. All maintenance will be carried out to the highest level.

Noise and other impacts on people:

With only having hens noise will be at a minimum. If there are any issues with noise we will address the situation immediately.

Removal of animals:

Any deceased birds will be composted and returned back into the system.

Any other considerations:
